

P&PM's Device Package Manager

**Packaging & Supplying
compatible Device Software
to Flash Events in Production & Service
leveraging Cloud Technology**

Embedded Software drives innovation speed and customer recognition of products & assets.

Software enables diverse features that make products and assets significantly more valuable for customers.

Without embedded software, products and assets are rarely competitive. Embedded Software therefore is a key differentiator.

Production as well as installation, repair and modification events of smart products and assets require the delivery of the right device software and device parameterization. Update and upgrade strategies of device software enable the automatic configuration of devices without special expertise – reducing the duration of production and service events. Facing an increased complexity of software functions, the more relevant become rule based update strategies leveraging cloud technology.

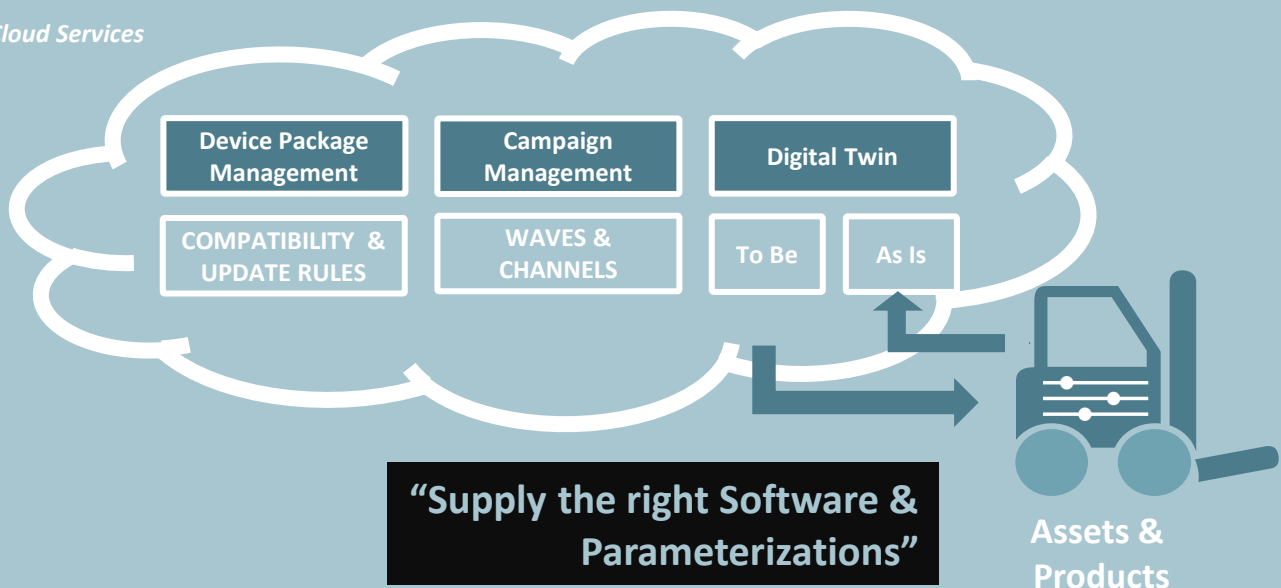

The ability to repair and modify software of smart devices becomes a key capability.

Reducing operating costs and enabling new business potentials during aftersales: Rule-based update & upgrade of device software

Business Events

Cloud Services

Opportunities:

>>> CUSTOMIZING SMART PRODUCTS & ASSETS
BY RE-CONFIGURATION

Resulting Benefits:

REVENUE GROWTH OPPORTUNITIES
AT NEW PRODUCT SALES & SERVICE BUSINESS

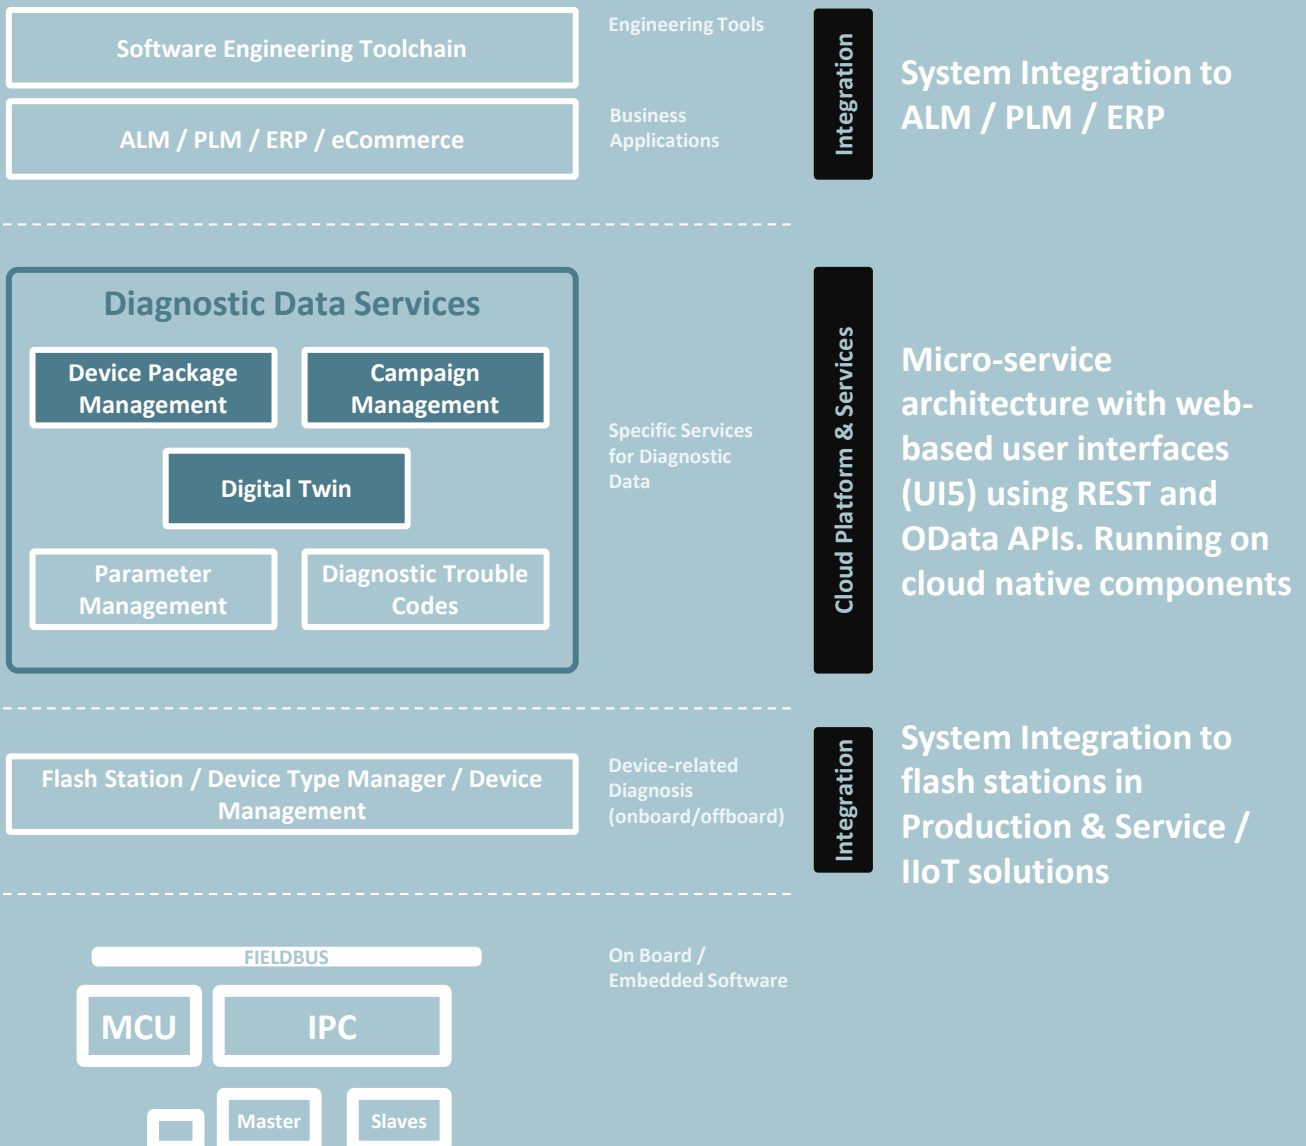

>>> CONTINUOUS ENRICHMENT
OF FUNCTIONS AT OPERATIONS

REDUCED OPERATING COSTS
DURING PRODUCTION & SERVICE EVENTS

>>> SPEED & QUALITY OF FLASH &
PARAMETERIZATION EVENTS

Centralized Diagnostic Data & Services as key enabler for Flash Events.

- Retrieval & Packaging of Software & Parameters for subsequent business events
- Rule definitions for update & upgrade strategies and compatibilities
- Channel & delivery control (onsite/offsite etc.)
- Planning & simulation of target states via Campaign Management and Digital Twins
- Central, cloud-based services to request the correct software package for restore, update and modification events

SOFTWARE AND PARAMETER PACKAGES

Manage device packages of diagnosis, flash and parameter files across the lifecycle and configure valid functions & releases for Production & Service offsite via Cloud Services

CAMPAIGN MANAGEMENT

Plan and define target states of device software and parameterizations and trace the implementation of updates in the field.

DEVICE PACKAGE MANAGER

RULE & CONSTRAINT MANAGEMENT

Manage rules & constraints for updates / retrofits to enhance quality and speed of operations during flash events as well as re-parameterizations

DIGITAL TWIN OF DIAGNOSTIC DATA

Use Digital Twins for restore, carry over and simulations of software & parameter settings

PUBLISH PACKAGES TO
RETRIEVING EVENTS

Packaging and retrieval of device software & parameter centrally via cloud services - integrated to your operations.

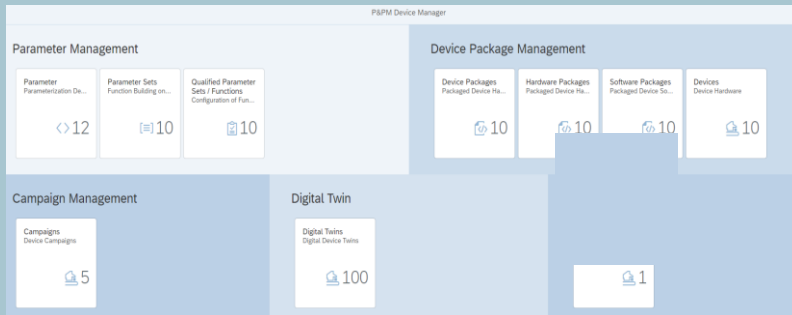

P&PM's Device Package Manager enables customers to configure packages of device software and parameters for publication to downstream production and service events.

Via its cloud services, configured packages are made retrievable via defined update rules to automatize flash & parameterization events.

P&PM's Device Package Manager is based on a micro-service architecture with web-based user interfaces (UI5) using REST and OData APIs. Running on cloud native components, customers can install it on diverse cloud platforms leveraging full potentials for diverse integration scenarios using different IoT hubs or Diagnosis Systems as well as core systems like ERP or ALM/PLM or MES systems.

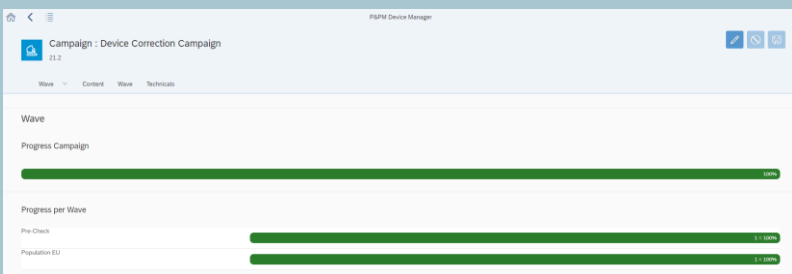

Manage Compatibilities and Update Rules and control the Deployments via active Campaign Management in combination with a Digital Twin

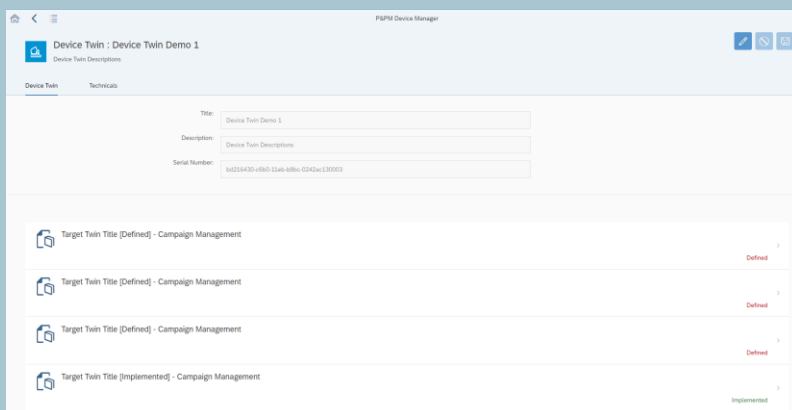

**Manage Software Packages,
Compatibility Rules
and Update Strategies**

Software Package	Software Stack	Generation	UDS-Platform
MCU Software Package Release 1.0 Release 1.0 of MCU Software Package	Software Stack UDS V-1	Generation 1	UDS-Platform Vehicles
MCU Software Package Release 1.1 Release 1.1 of MCU Software Package	Software Stack UDS V-1	Generation 1	UDS-Platform Vehicles
MCU Software Package Release 1.2 Release 1.2 of MCU Software Package	Software Stack UDS V-1	Generation 1	UDS-Platform Vehicles
MCU Software Package Release 1.3 Release 1.3 of MCU Software Package	Software Stack UDS V-1	Generation 1	UDS-Platform Vehicles
Sensor Software Package Release 1.0 Release 1.0 of Sensor Package	Software Stack UDS T-1	Generation 1	UDS-Platform Trucks
Sensor Software Package Release 1.1 Release 1.1 of Sensor Package	Software Stack UDS T-1	Generation 1	UDS-Platform Trucks
Sensor Software Package Release 1.2 Release 1.2 of Sensor Package	Software Stack UDS T-1	Generation 1	UDS-Platform Trucks
Sensor Software Package Release 2.0 Release 2.0 of Sensor Package	Software Stack UDS T-1	Generation 1	UDS-Platform Trucks
Sensor Software Package Release 2.1 Release 2.1 of Sensor Package	Software Stack UDS T-1	Generation 1	UDS-Platform Trucks
Sensor Software Package Release 2.2 Release 2.2 of Sensor Package	Software Stack UDS T-1	Generation 1	UDS-Platform Trucks

**Maintain Campaigns
to steer Updates
in the field**

**Analyze Target States as well as As Maintained States
via a Digital Twin of Diagnostic Data**

Mission

Enhance quality and speed of operations during flash events of device software updates by rule-based update strategies based on defined update packages. Automation of flash events without user interaction.

Cap-abilities

Retrieval & Packaging of Software & Parameters for subsequent business events
Rule definition for update & upgrade strategies and compatibilities
Channel & delivery control (onsite/offsite etc.)
Planning & simulation of target states via Campaign Management and Digital Twins
Central, cloud-based services to request the correct software package for restore, update and modification events

Use Cases

Offline Engineering of software and parameter packages by defining compatibility and update strategy constraints
Flash events at Testing, Production, Service & Aftersales - delivery of valid software and parameter packages to downstream events
Configuration of products (vehicles etc.) and assets (machines, sensors etc.) with the right compatible software

Stakeholder

Diagnosis / Application Engineers as well as Product Managers
Production Engineers and Operations Manager
Service Engineers (Retrofit Design) as well as Service Technicians
Customers buying Software Features

Tech-nology

Micro-service based architecture with web-based user interface (UI5)
REST and OData APIs
Runs on any **Cloud Platform** with Cloud Foundry Runtime
Flexible Integration into existing IT landscapes (PLM/ERP/MES/IOT Hubs etc.)

About P&PM

P&PM designs and implements solutions to manage Software within your Products & Assets along their lifecycle.

P&PM was founded by experienced consultants in 2012 leveraging knowledge both from diverse operations transformation and application implementation projects especially within the Engineering and Service domain.

P&PM's office in Rösrath, near Cologne, Germany

**P&PM is a special expertise consultancy
in the area of PLM – Product Lifecycle Management
– and SAP / Cloud Technology.**

**P&PM supports you in transitioning your operations
to manage the growing complexity
of software in your products along the
value chain and product lifecycle.**
